## **KATHRYN WRIGHT**

### **MEISTER CONSULTANTS GROUP**

### **ENERGY STORAGE**

- Unique suite of technologies
  - Batteries
  - Thermal storage
  - Pumped hydro
- Scalable
  - Building-scale
  - Utility Scale
- Versatile Uses
  - Energy savings
  - Support on-site generation
  - Resiliency

Image from Overview of Energy Storage Opportunities Report

### **LOCAL CONTEXT**

BOSTONIA. CONDITA AD. 1630. MINE DOUBLE

80% GHG Reduction by 2050 200 MWh Storage by 2020 80% GHG Reduction by 2050 Increase local and low-carbon energy Analysis of 80x50 Pathways Support City's climate goals

### **MARKET CONTEXT**

### BATTERY PRICE PROJECTIONS [Y-AXIS 2012\$/kWh]

- Storage system costs, and batteries in particular, are rapidly decreasing.
- The rate at which storage system costs is expected to continue to decrease.

## **USE CASES AND BENEFITS**

#### **Emergency power**

- Support critical loads
- Increase capacity and length of service of traditional generators
- Reduce business
   interruption costs

#### **Demand Management**

- Deliver energy savings and reduce utility bills
- Demand charges in Boston on some commercial rates meet or exceed industry costeffectiveness tests
- System parameters tied to building load and energy use type

#### **Grid Services**

- Respond to utility demand management programs
- Potential for wholesale market services

### **TECHNOLOGY OVERVIEW AND DECISION SUPPORT**

|               | Lead Acid <sup>1</sup>   | Lithium Ion <sup>1</sup>  | Flow <sup>1</sup>   | Thermal   |
|---------------|--|---|---|---|
| Description   | A form of electrochemical battery<br>storage, in which energy is stored<br>and released by means of a<br>chemical reaction. Typical types<br>include sealed, flooded, valve-<br>regulated, absorbent glass mat,<br>and gel. Additives and differences<br>in plate structure offer a variety of<br>lifetime or performance<br>advantages. | A form of electrochemical battery<br>storage in which energy is stored<br>and released by means of a<br>chemical reaction. Many variations<br>exist but typically contain lithium,<br>cobalt, nickel, manganese, and<br>aluminum.                                       | A form of electrochemical battery<br>storage that relies on a system of<br>tanks, pumps, dissolved chemicals,<br>and chemical reactions to charge<br>and discharge electricity. This<br>technology is in its earlier stages<br>and has not reached the<br>commercial scale of the others<br>listed in this table. | Thermal storage stores energy<br>(directly) or electricity<br>(indirectly) in the form of heat<br>or cold. By removing heat from<br>or injecting heat into the<br>storage container, thermal<br>systems allow the warmth or<br>cold to be used later. Among<br>the many types are molten<br>salt, hot water, and ice. |
| Typical Uses  | Resiliency, limited grid support,<br>peak load management, renewable<br>energy firming, uninterruptible<br>power supply (UPS)  | Resiliency, grid support, peak load<br>shifting, renewable energy firming,<br>UPS   | Resiliency, grid support, peak load<br>shifting, renewable energy firming,<br>UPS, bulk power management  | Heating, ventilation, and air<br>conditioning support; peak<br>load shifting; onsite fossil fuel<br>reduction (e.g. boiler), limited<br>grid support, district heating  |
| Cost          | \$150–\$300/kWh  | \$250–\$1,500/kWh   | \$680–\$2,000/kWh   | \$72–\$240/kWh  |
| Expected Life | 5–10 years   | 10-15 years   | 10-20 years   | 20+ years   |
| Advantages    | <ul> <li>Well-known, reliable technology.</li> <li>Can withstand deep discharges,<br/>but at reduced life expectancy.</li> <li>Relatively low cost.</li> </ul>   | <ul> <li>High energy density allows for<br/>high-power applications.</li> <li>Can withstand deep discharges.</li> <li>Has a high cycle life, allowing<br/>more intensive use or a longer<br/>life</li> </ul>  | <ul> <li>Relatively safe.</li> <li>Easy to scale up, and well suited<br/>for higher-capacity (duration)<br/>uses.</li> <li>Long useful life.</li> </ul>   | <ul> <li>Low cost.</li> <li>Flexible sizing.</li> <li>Power and capacity ratings<br/>are independently scalable.</li> <li>Leverages a mature<br/>technology base.</li> <li>Can utilize waste industrial<br/>heat to improve efficiency.</li> </ul>  |
| Disadvantages | <ul> <li>Shortest life expectancy, due to<br/>lower number of useful cycles.</li> <li>Lower energy density, meaning<br/>that more space will be required<br/>to provide the same amount of<br/>energy storage as other<br/>technologies.</li> </ul>  | <ul> <li>Can be more expensive than<br/>traditional energy-storage<br/>systems.</li> <li>Requires a sophisticated control<br/>system to mitigate fire risk (e.g.,<br/>from thermal runaway).</li> <li>Not readily recyclable and is a<br/>toxic waste issue.</li> </ul> | <ul> <li>Relatively high cost.</li> <li>Low efficiency (less than 70%).</li> <li>Low energy density and thus can take up larger amounts of space.</li> <li>High maintenance due to pumps.</li> <li>Currently in the early stages of commercialization.</li> </ul>   | <ul> <li>Does not always directly<br/>address electric loads,<br/>because it typically covers<br/>heating and cooling.</li> <li>Difficult to modularize for<br/>smaller installations.</li> </ul>   |

### PANEL I:

### **ECONOMIC AND INCENTIVES**

## **JASON BURWEN**

**ENERGY STORAGE ASSOCIATION** 

### **Energy Storage**

Jason Burwen Energy Storage Association

> A Better City April 17, 2018

Energy Storage Association

www.energystorage.org

### In this presentation...

- What is storage?
- Why deploy storage?
- What offerings are available?
- Some considerations

### **Energy Storage = Flexibility**

Supplies precise amount of electricity exactly when and where it is most needed, regardless of when it was generated

Energy Storage Association

### Storage is in all parts of the grid

### Primary kinds of customer storage

#### **Thermal storage**

- Time-shifts load (demand response)
- Integrated into or distinct from building equipment/ materials

#### **Battery storage**

- Time-shifts load (demand response) or injects to grid
- Provides onsite electric backup
- Distinct from building equipment/materials

Energy Storage Association

### Why is storage important?

Storage optimizes use of the grid & enables system transformation

- Saves households & businesses money reduces spending on excess capacity to meet peak system & local demands, optimizes use of grid assets, reduces time-varying electric costs & demand charges
- Makes service more reliable & resilient balances supply & demand fluctuations; mitigates anomalies, supply disruptions, & outages; manages risk in long-term planning
- Integrates more clean & distributed energy compensates natural variability of renewables; increases capacity for other distributed energy resources

### Rates as a driver of customer storage

Medium C&I Energy Storage Returns from Demand Charge Management Alone

Source: GTM Research The Economics of Commercial Energy Storage in the U.S.: The Outlook for Demand Charge Management, 2016

### **Storage in network capacity**

- Reduces local peak demand & increases circuit power quality
   → defers or avoids substation and circuit upgrades
- Onsite backup at municipal facilities & critical infrastructure
- Containerized storage can be re-located over time → reconfigurable grid + effective risk management

### **Onsite storage providing resilience**

### Stem: LBA Park Place, Irvine CA

"We continue to demonstrate leadership in enhancing our properties with smart building technologies that increase sustainability, strengthen the local power grid, and reduce costs for our tenants. The installation of Stem's cutting-edge technology is the most recent demonstration of this commitment."

Perry Schonfeld, Principal and COO, LBA Realty LBA Realty installed the world's largest indoor energy storage system at Park Place to reduce operating costs and to support sustainability efforts. In addition to providing value for the owners and tenants, this system participates in Stem Grid Rewards with Southern California Edison to help relieve grid congestion in the West LA Basin.

#### System size: 1.3 MW / 2.6 MWh

Energy Storage Association

### Johnson Controls: University of Hawaii

#### System:

#### **UH Maui College:**

- 2.8 MW of solar PV and 13.2 MWh distributed energy storage

#### Four UH Community Colleges:

- 7.7 MW of solar PV and 28.6 MWh distributed energy storage

#### **Applications:**

- Renewable energy support
- Integration with other energy efficiency measures

#### Value:

- \$79 million in energy savings over 20 years
- UH Maui College: 100% renewables in 2019
- Four UH Community College campuses also reducing fossil fuel use
- Education

### **Recent public policy efforts**

- Number of Massachusetts government initiatives to promote energy storage
  - Existing efforts: ACES grants, SMART incentives, etc
  - Pending legislation: storage deployment targets, incentive programs, clean peak standard, property tax equalization
- Increasing ability for large customers to provide services to ISO-NE bulk system
- New paths opening for potential service to local distribution systems
  - Ex: Eversource EEAC contracts

### Thank you

## **KAVITA RAVI**

MASSCEC

### Energy Storage in the Commonwealth: Policies and Programs

Kavita Ravi Director of Emerging Markets April 17, 2018

#### **Energy Storage Initiative and Actions**

#### **Energy Storage Initiative (ESI)**

- Aims to find the most cost efficient and effective way to help transform the Commonwealth energy market
  - Market expansion, valuation of storage benefits
  - Policy recommendations and development
  - Technology development

#### State of Charge Study and Recommendation

#### State of Charge Study

- DOER and MassCEC released the *State of Charge* study to analyze the potential benefits of incorporating energy storage technologies into Massachusetts' energy portfolio.
  - Energy storage can potentially provide \$800 million in system benefits to Massachusetts ratepayers
  - Recommends policies to promote development of 600 MW advanced energy storage in Massachusetts by 2025

#### Advancing Commonwealth Energy Storage (ACES) Demonstration Projects

The ACES program is funding **energy storage demonstration projects** that pilot **innovative, broadly replicable use cases/business models** with multiple value streams in order to prime Massachusetts for increased commercialization/deployment of storage technologies.

The Baker Administration originally allocated \$10 million but increased it to \$20 million in December 2017.

#### **ACES Timeline**

#### **Example ACES Awards** Boston Medical BTM C&I: Sola + Storage Merchant: Sola + Storage Ameresco - Partners Center Legend Legend OWNER OWNER Business Business × case case 入 Boston Medical Center details details Eversource Eversource Use case Use case FINANCIER < FINANCIER < Boston Medical Center Utility Ameresco Utility Green Charge Tesla Networks Tech Provider Tech Provider BENEFICIARIES BENEFICIARIES Boston Medical Demand Energy Host Ê Â Ê Host Center Networks BTM C&I Solar+Storage Use Case: Merchant, Solar+Storage Use Case: Technology: Li-on Battery Technology: Li-on Battery Capacity: 520kW/1044kWh Capacity: 250kW/500kWh Host Site Type: Hospital Host Site Type: Commercial Location: Boston Somerville Location: **Benefits:** Benefits: Demand charge reduction **Demand charge reduction** • • ISO NE demand response ISO-NE capacity tag reduction and frequency regulation ٠ ۰ Critical equipment support, resiliency and backup power **ISO-NE** capacity tag reduction ٠ through voltage support Customer resiliency . Reduced power outage-related safety threats Support of low income communities ٠ . **GHG** reductions Upgrade deferral • Wholesale market costs reduction, grid congestion relief **GHG** reduction

#### **Incentives on the Horizon**

#### **Community Clean Energy Resiliency Initiative (CCERI)**

CCERI is a grant program to protect communities from energy service interruptions caused by severe climate events.

- Focus on critical infrastructure, technical assistance, resiliency
- \$40 million in allocated funds; three rounds of grants to date

#### **SMART Program**

Massachusetts Department of Energy Resources (DOER)'s solar incentive program, with storage adder. Currently in DPU docket process, expect early summer 2018.

#### Storage in the Alternate Portfolio Standards (APS)

Plans for APS to include energy storage, possibly incentivizing storage with existing solar or standalone

Stakeholder sessions in late Spring 2018

#### Energy Storage Safety Training, Codes and Standards

#### Safety Training, Codes and Standards

- State of Charge study recommendations include clarification and development of safety training, codes and standards
- Will ensure robust market and facilitate smooth deployment of energy storage

#### **Moon Island Project**

- Primary purpose: demonstrate, inform, and support the development of storage fire safety training, codes and standards with a solar plus storage system
- Secondary purpose: provide energy resilience to the Boston Fire Department training facility
- Collaboration: MassCEC, Boston Fire Department, City of Boston, DNV-GL

# **CLEAN ENERGY GROUP**

# The Economics of Behind-the-Meter Energy Storage in Massachusetts

### HARNESSING THE POWER OF ENERGY STORAGE IN BOSTON'S COMMERCIAL BUILDINGS

Todd Olinsky-Paul April 17, 2018

# Who We Are

# THE **KRESGE** FOUNDATION

ENERGY FOUN

RFS

www.resilient-power.org

**FUND** 

**HIGH MEADOWS** 

# **The Economics of Battery Storage**

At current costs... the capital cost to deploy 1,766 MW of storage could be in the range of \$968M - \$1,355M, and the total value of storage over 10 years could be around \$3.4 billion. --State of Charge

# The value of storage is partly due to the high costs of our oversized grid

The highest value of storage is in providing *capacity* to meet demand peaks... *not* in providing bulk energy.

### From Massachusetts State of Charge report

#### www.resilient-power.org

# Energy storage reduces costs by shaving peak loads (on either side of the meter)

Peak reduced from 100 kW to 65kW = **35 kW** reduction

Savings depend on **cost** of demand

Demand charges @ \$10/kW = **\$4,200 annual savings** Demand charges @ \$20/kW = **\$8,400 annual savings** 

Generally, commercial customers paying **\$15/kW or more** in demand charges may be able to install batteries economically for demand charge management (without subsidies).

# **Energy Storage for Demand Charge Management (BTM) in Massachusetts**

# **Demand charge rates in Massachusetts**

| Utility / Demand \$/KW Commercial Industrial   | MA demand charges as of July, 2016 (pre-Eversource rate case) |                                     |                                     |  |  |  |
|--|---|-------------------------------------|-------------------------------------|--|--|--|
| (non-summer / summer / | lity / Demand \$/KW   | Commercial<br>(non-summer / summer) | Industrial<br>(non-summer / summer) |  |  |  |
| National Grid \$6.00 \$3.92  | National Grid   | \$6.00                              | \$3.92                              |  |  |  |
| Eversource NStar \$17.37 / \$41.25 \$19.15 / \$25.12   | Eversource NStar  | \$17.37 / \$41.25                   | \$19.15 / \$25.12                   |  |  |  |
| Eversource WMECO \$13.36 \$10.74   | versource WMECO   | \$13.36                             | \$10.74                             |  |  |  |
| Unitil \$9.58 \$7.88   | Unitil  | \$9.58                              | \$7.88                              |  |  |  |

### BTM economic analysis, from State of Charge report

In this analysis, the value the customer realizes from demand charge management (light green bar) is based on a demand charge rate of \$7.84/kW.

# Scale of opportunity in MA

More than 70,000 commercial customers in Massachusetts *currently* pay demand charges that would make energy storage economical (>\$15/kW).

# (Light blue areas are highest demand charges)

# **Edwards D. Hassan Apartments**

- Boston Housing Authority affordable senior housing facility in Hyde Park, MA
- 100 apartments
- Electric heating
- Common areas include kitchen, four laundry facilities, common room, 2 elevators
- System modeled:
  - Solar: 150 kW DC (cost: \$375,000)
  - Storage: 30 kW/45 kWh Li-Ion battery (cost: \$88,604)
- Total capital cost: \$463,604

Seasonal load profile Electric heat = high winter peak loads

### Hassan Apartments Baseline Utility Bill Analysis is on common loads only – not individual apartment loads

### **Solar+Storage payback = 5.3 years**

### What the analysis includes:

- Federal ITC
- Federal accelerated depreciation

### What it doesn't include:

- SMART solar incentives (with storage adder)
- Income from Alternative Energy Certificates
- Other market programs (demand response)

# Jewish Community Housing for the Elderly

#### **Coleman House:**

146-unit affordable senior housing facility Newton, MA

System modeled: 116 kW solar 55 kW/226 kWh Li-Ion Battery

### Demand charge:

\$28.92 / kW June – September \$20.47 / kW October – May

#### Modeling:

System modeled over 25 years, with battery replacement at 10 years IRR > 18% Assumes SMART incentive and ITC

Annual load profile (two meters)

### Payback reached in year 5

# **Boston Medical Center**

**Baseline Capacity Charges** 

**Eversource T&D charge:** 

Summer = \$24.82/kW Winter = \$18.86/kW

### **ISO-NE Capacity Cost (icap) charge:** \$9.96/kW-month

# Result: Hospital is currently paying annual demand costs of \$1,247,000

1,060 kW / 2,120 kWh battery to be located on the roof of the Yawkey Ambulatory Care Center, next to existing CHP

Project Installed Cost: \$1,500,000

MassCEC Grant: \$402,500

**Project Economics:** 

Annual Savings: \$200,000

Simple Payback: 7.5 years (without grant) 5.5 years (with grant)\*

Note: This installation is costly due to rooftop location, and high hospital load factor. Ground installation, or a lower load factor, would result in lower installed cost and lower simple payback.

| 12               | 21/22    | \$        | 4.63 | \$                  | 6.43 |  |  |

## APS

## **BMC** Savings

T&D Demand reduction 310-1060kw/month.

Annual savings = \$110,000

Capacity reduction 1060kw

Annual savings \$90,000

Total Annual Savings: \$200,000

Annual Demand Costs: \$1,247,000

Annual Demand Savings = 16%

Backup power available to critical communications, and helipad

Able to condition power from CHP when islanded to support high load hospital equipment

System is able to interface with CHP to improve black start

System will now cover demand spike during CHP trip/restart

Project Cost: \$1,500,000

Annual Savings: \$200,000

Simple Payback: 7.5 years (w/o grant)

Mass CEC Grant: \$402,500

Simple Payback: 5.5 years (w / grant)\*

\*Ground installations will have a lower simple payback. \*Lower load factor accounts will have lower simple payback

only Bay State Wind, but it will help solidify Massachusetts as a nichal leader in the o

## Storage-Based Services for Commercial Buildings

### **Boston-Area Hospital Resiliency Project**

- Goal: Energy resiliency microgrid
  - Backup power during grid outages
  - Economic dispatch (peak shaving)
- Energy storage:
  - Supports CHP plant when grid-connected (i.e. smooths paralleled CHP/grid vs. load against utility import maximums)
  - Provides microgrid frequency regulation and transient load control when islanded
- ~700kW / 500kWh energy storage system
- Mid-2018 installation, with expected extension to multiple sites
- MA DOER Resiliency Grant program support
- Similar to NYC project underway; other projects around the world
