Wharf District | Financial District EDGES STUDY

Design for Urban Edges along the Rose Kennedy Greenway

A STUDY SPONSORED BY THE ARTERY BUSINESS COMMITTEE AND A GRANT FROM THE BOSTON FOUNDATION
IN COOPERATION WITH THE BOSTON REDEVELOPMENT AUTHORITY | BOSTON TRANSPORTATION DEPARTMENT | BOSTON DEPARTMENT OF PARKS AND RECREATION | CENTRAL ARTERY TUNNEL PROJECT | MASSACHUSETTS TURNPIKE AUTHORITY
WHARF DISTRICT
FINANCIAL DISTRICT
EDGES STUDY AREA
Purpose

The impetus for a study of the urban edges of the Rose Kennedy Greenway as it passes through the Wharf and Financial districts has been driven by the conviction that the full value of the park will best be realized when complemented by programmed activities within or around the open space. This approach was enshrined in the third of the "5 Principles for Design and Programming" of the Wharf District parks, to "support and surround open space with people and activities". The essence of this approach is that open space is at its best when intensely used, at its worst and most bereft when empty. The critical focus in previous studies was on the vitality of this space in off-hours and out of season when the city has emptied out after the day's work and the weather is not conducive to outdoor activities.

This Edges Study documents the Greenway abutting properties in the Wharf and Financial District and their relationship to the C17A6 Contract streetscape. The study identifies potential areas for intervention and makes recommendations for design and programming improvements for both indoor and outdoor, public and private ground floor spaces, including possible minor modifications of the C17A6 Contract design. The goal of this study is to create a comprehensive vision, maximizing and enhancing the active public use of building edges and sidewalks on both sides of the Wharf District parks, which would promote a similar effect within the new public realm in the middle.

Methodology

The documentation of existing conditions includes a variety of data from numerous sources:

1. **Mapping** - derived from the BRA's Boston Atlas; Central Artery contract documents; individual building plans; and on-site documentation.
2. **Photographic Surveys** - on site photographic documentation, mainly in summer of 2003.
3. **Quantitative Data** - derived from the BRA's Boston Atlas, from the Boston Transportation Department and from individual building owners.
4. **Public Policy and Regulations** - including parking and traffic policy, sidewalk regulations and zoning information - derived from the Boston Transportation Department and from the Boston Redevelopment Authority.
5. **Programmatic Data** - derived primarily from interviews with neighbors and abutters.

Definition of Study Area

The boundaries of the study are defined by geography and abutter interests. On the Harbor side of the corridor the boundary is the water's edge. On the west side the boundary is, generally speaking, one block back from the edge of the corridor with reference to special conditions beyond (e.g. the broad Street / Franklin Street neighborhood, McKinley Square and Quincy Market). The northern boundary is delimited by Parcel 12 and a line drawn from Commercial Street and Clinton Street. On the south end of the Wharf District the boundary will include the north end of Parcel 19 and the edges to Oliver Street and the Evelyn Moakley Bridge.

Urban Character

This survey of existing conditions touches upon three critical areas as avenues into defining the character and determining the potential of the Wharf District:

- **Topography and History**
- **Transportation and Land Use**
- **Urban Fabric**

Through these avenues of interpretation and research, a case is built up for defining specific identifiable places within the Wharf District, each with its own character based on topography, history, function and fabric. The outcome of this approach is indicated in the final map in this section indicating Areas of Intervention grouped into four distinct spatial clusters.

Topography and History

The stretch of the Rose Kennedy Greenway that passes through the Wharf District from Oliver Street up to Clinton Street is distinguished from other sections of the boulevard by its proximity to the waterfront. In this crucial respect the Greenway encounters an asymmetry between one side and another, between city and harbor, more than at any other point along its run.

It is the conclusion of this study that the topographical characteristics and historical narratives are best honored not as museum pieces but as indicators for future intervention relating the city to its waterfront and by upholding the logic of a street pattern that grew out of that specific and topographically unique relationship that linked the physical activities of the waterfront to the financial institutions built on trade.

Transportation and Land Use

The transportation, land use and retail development maps indicate a downtown that has a mix of uses accessible by all modes of public and private transportation for a wide variety of purposes whether it be commuting to work, living in the area or visiting for tourism and recreation.

Critical issues arising out of the overview of transportation are firstly, the congestion and conflicts caused by various modes of tourist transportation and the need to find convenient and amenable off-site parking for several types of vehicles; and secondly, the need to provide public transportation links between the Greenway, other parts of the Wharf and Financial Districts and surrounding areas.

The main findings from the ground floor land use documentation are threefold:

1. In response to the interruption of the city streets crossing Atlantic Avenue by railroad tracks and, latterly, by the elevated highway, many of the buildings along that corridor have accommodated themselves to that interruption by either blocking off those edges or by neglect. In addition, that edge condition below: GROUND FLOOR LAND USE PLAN – showing commercial, restaurant, entertainment, retail, residential, hotel, institutional, structured parking and mechanical rooms
has provided an opportunity for locating parking structures and service entrances. The removal of the elevated highway provides a challenging opportunity to reverse and redress those conditions.

2. While there is a good mix of uses in the area, the Boston Redevelopment Authority initiative in providing incentives for more residential development in the area needs to be complemented with the provision of an infrastructure of smaller scale retail and service outlets to support the residential population.

3. The retail sector overview emphasizes the potential for improving the quality of downtown living and animating the sidewalks. Zoning policy in favor of this direction would have to be supported by a consideration of the economic viability of small-scale retail investment in a relatively high rent district.

EXECUTIVE SUMMARY

URBAN FABRIC
Maps depicting aspects of the urban fabric document specific physical characteristics (the variety of paving materials) and the environmental quality engendered by combinations of materials and physical conditions (Inviting and Uninviting Pedestrian Streetscapes). The range of elements documented in these drawings does however lay out a palette of urban design elements that can be worked with to upgrade the public realm.

PRINCIPLES FOR URBAN DESIGN IN THE WHARF DISTRICT
Four planning principles inform many of the considerations incorporated in the individual design studies and the proposed interventions

1. **TO CREATE ATTRACTIVE SUSTAINABLE URBAN ROOMS** - a principle embracing a broad view of sustainability to include historic preservation, accessible economic activity and efficient public transportation as well as environmentally responsible landscaping and development;

2. **TO CREATE A VIBRANT MIX OF USES FOR URBAN ACTIVITY** - a principle for creating a successful mix of land uses in an effort to provide all-day, all-week, all-season levels of activity that make the city and the open space lively and attractive;

3. **TO CREATE A SAFE AND INVITING PEDESTRIAN ENVIRONMENT** - a principle for creating pedestrian space surrounding and leading to the Greenway; and,

4. **TO CREATE A DISTRICT EASY TO GET TO AND THROUGH** - principles for managing traffic, parking and the servicing of buildings within this congested area.
EXECUTIVE SUMMARY

AREAS OF INTERVENTION

A map showing Areas of Intervention immediately adjacent to the Greenway addresses the original challenge posed by the transformation of the elevated highway into public open space. While this study is limited to describing the potential for design interventions in and around the abutting buildings, it is to be hoped that these proposals will provoke a reciprocal response in the design of the Greenway and in the network of adjoining streets.

The areas of intervention are differentiated by place, sub-districts defined by topography, history, function and physical fabric. By defining these sub-districts as distinct ‘places’ in themselves, it is the intent of this study to stimulate initiatives in the public realm by the City and to initiate a rapport between property owners so that they work together to create improvements in concert with one another, thereby enhancing the quality and identity of their shared environment.

The areas of intervention delineated on the map have been determined by two primary considerations. Firstly, there are those properties adjoining the Greenway whose owners are taking the initiative to respond to the opening up of their buildings to the public open space and to adjust and improve their properties accordingly. Cases in point include International Place, Hook Lobster, Rowes Wharf, Harbor Towers, the Harbor Garage, Marketplace Center and the Marriott Long Wharf Hotel.

Secondly, there are those areas adjoining the Greenway that are extensions of the public realm where the quality and purpose of the street can be improved as a result of the Greenway development. Instances of this type of public realm improvement include the Oliver Street / Fort Point Plaza; the potential opening up of a pedestrian walkway along Wharf and Wendell Streets linking Broad Street to East India Row; and the development of a more functional and attractive public space on Parcel A3N in front of the Aquarium. In the latter cases, while there are no direct client advocates, the proposal will serve as a vision for action around a common interest involving public / private cooperation.

PLACEMAKING

Following the principles laid out in earlier sections, the proposed interventions are grouped with the aim of creating distinct places, each with their own character. The assessment of the neighborhoods is based on the premise that the strongest design interventions will be based on a thorough understanding and definition of place and site. This approach to site analysis is based on an understanding
of natural topography (e.g. the Fort Hill area being the original edge of the Shawmut peninsula drumlin); the historical development of urban form (e.g. the development of State Street and Long Wharf as coextensive phenomena); and the identification of significant architectural forms that create places within the urban matrix (e.g. the Custom House Tower and the Rowes Wharf Arch).

Based on these categories, the following four sub-districts are delineated in the map on the preceding page and summarized below:

- Fort Hill / Rowes Wharf
- Broad Street / India Wharf
- Custom House / Central Wharf
- Quincy Market / Long Wharf

These brief descriptions of characteristic ‘places’ within the Wharf District are followed by detailed studies of properties and places within each sub-district.

1. Fort Hill / Rowes Wharf

a. This neighborhood is clearly marked by the signature landmarks of the towers of International Place, the Old Northern Avenue Bridge and the great arch at Rowes Wharf. Historically, the rise in elevation at the location of International Place was Fort Hill, from colonial times the site of battery emplacements protecting the inner harbor.

b. A significant characteristic of the buildings facing the Greenway is the preponderance of service and parking access ramps as well as mechanical rooms. If the natural limits of this neighborhood are viewed as a triangle defined by High Street, Oliver Street and the waterfront there is a strong suggestion that the buildings present their most accessible frontages facing ‘outwards’ (towards the city one side, Fort Point Channel on the other) and their service areas ‘inwards’, towards Parcel 18 and the surface artery. These ‘outer’ faces are therefore more disposed to pedestrian traffic (particularly the outstanding length of accessible waterfront), and the inward looking elevations more towards vehicular traffic, especially around Oliver Street and the highway access ramps.

c. There are four ‘gateways’ into the triangle: at Fort Hill Square leading down either Oliver or High Street into the Greenway and the waterfront; at the Northern Avenue and Old Northern Avenue bridges that act as gateways between the Seaport and the Financial District; and at Rowes Wharf where the arch serves as the gateway between the harbor and the city proper.

d. One route for pedestrians, often highlighted as being particularly hazardous, is the sidewalk on the north side of Oliver Street linking Fort Hill and the Channel. This route brings pedestrians into immediate conflict with vehicles coming out of the southbound off-ramp or turning into the northbound access ramp to the highway tunnel. For this reason alone, the Oliver Street south side sidewalk should be designed as the major cross route for pedestrians.

2. Broad Street / India Wharf

a. The conjunctions of smaller scale buildings clustered around the Broad Street and Franklin Street crossroads are firstly, a reminder of the fine-street scale of eighteenth and nineteenth century Boston and secondly, an opportunity to encourage a pattern of small and medium scale mixed use within an otherwise high rise neighborhood.

b. While the natural ‘gateway’ between the city and the Greenway is at the crossroads of Broad and Franklin, the ‘signature place’ is the narrow and serpentine Wendell Street, presently a back alley but potentially a pedestrian place of outstanding charm.

c. While the charm of the small scale brick buildings and the grace of the aptly named Broad Street present opportunities for residential and small-scale retail and commercial development, the economic viability of such projections needs to be determined.

d. As constituted, the two Harbor towers are signature buildings in themselves, a landmark on the harbor’s edge but in both architectural form and use, isolated from the water’s edge and the city. Although the adjacent retail stores in the Garage structure provide some services of interest to the residents and the Harbor Walk provides a recreational trail, the ‘neighborhood’ is in effect within each tower structure.

e. The physical isolation of the residents from their urban surroundings is articulated in the architecture of the two towers and their grounds. The blank wall to the Greenway and the exclusion of the public from the most direct route across the property are both significant issues to address in the reengagement of this residential community with the Greenway and the city on the other side. In this respect, the potential for the development of small scale retail in the Broad and Franklin Street neighborhood signifies the greatest prospect for re-establishing walkable links to the city.

3. Custom House / Central Wharf

a. This matrix of streets and buildings constitutes the most archetypal of the lateral connections across the Greenway. State Street and Central Street each form strong functional and historic links between the wharves and the city, signified in the landmark of the Custom House tower. Both streets are, at almost any point, a gateway into the city or out to the harbor.

b. There is an outstanding opportunity for drawing the ends of these lateral axes in to a center established within the Greenway engaging the street frontages of the existing buildings to establish pedestrian circulation and activity throughout the length.

c. As the principal focus of tourism, the critical issue in this area is parking for the tour buses and the trolleys as well as taxis. In the summer months in particular, the frontage to the Aquarium, the outside dining to 255 State Street, the entrance to the Marriott Hotel and the pedestrian access to the boats are all rendered chaotic and dysfunctional by the logjam of vehicles in the area, either parked or attempting to circulate.

4. Quincy Market / Long Wharf

a. The two major existing landmarks of Quincy Market and Christopher Columbus Park are both well established and both on the tourist trail, linked, at least conceptually, by the Walk to the Sea.

b. The street frontages of both Marketplace Center and the Marriott Hotel constitute the main areas of interest for design intervention. Both buildings have the potential for storefront development. Both buildings also present design challenges in the form of mechanical rooms and garbage dumpsters fronting the sidewalk.
Implementation

PRIVATE AND PUBLIC INITIATIVES
This study has documented a wide range of potential projects in the Wharf District responding to the prospect of the new parks, varying in status from conceptual to imminently real. Most of the project proposals described here are on private property and are therefore subject to individual property owner’s initiative and decisions to invest. Some proposals are being developed to a level of detail sufficient for pricing, if not actual construction. Others rely on agreements between groups of private owners or on possible public-private partnerships to be realized.

One of the benefits of the study process has been the catalytic effect of bringing together individual parties to address matters of common concern. It is to be hoped that this document will act as the basis for further collaboration to improve the physical fabric and the maintenance of both private property and the public realm on the edges of the Greenway.

CONCURRENT PLANS
In addition to the private initiatives documented here, there are ongoing public projects that immediately affect the Wharf District. The Central Artery contracts ongoing at the time of writing are:

- D032B Wharf District Parks. Currently in design, the construction start is scheduled for Spring 2005, completion in 2006.
- Parcel 18 Request for Proposals (submissions due June 2004)

The City of Boston has completed and is currently undertaking major studies that will affect this area:

- BRA Crossroads Initiative (in progress)
- BRA Fort Point Channel Watersheet Activation Plan (complete)
- BRA Northern Avenue Bridge Restoration (in progress)
- BTD Access Boston 2000-2010 (complete)

The varying status of these continuing initiatives and their potential for implementation is summarized in the table (adjacent) and, for the 17A6 contract, in Appendix One

PROJECT | PROPOSED / OWNER | PUBLIC / PRIVATE | STATUS | FURTHER ACTION / IMPLEMENTATION
--- | --- | --- | --- | ---
A1 International Place restaurant / cafe | Fort Hill Associates | Private | Feasibility Study | Continuing
A2 Independence Wharf frontage upgrade | Independence Wharf LLC | Private | In construction |
A2 Hook Lobster Outdoor Cafeteria | James Hook and Co. | Private | Feasibility Study | Continuing – proposal due Spring 2004
A3 400 Atlantic Avenue facelift | Atlantic Avenue LPS | Private | Feasibility Study | CA/T to replace brick sidewalk
A4 Rowes Wharf / Harbor Hotel / Rowes Wharf Residence frontage | Equity Office Properties / Rowes Wharf Condominiums | Private | Feasibility Study | Continuing
B1 Harbor Towers Atlantic Avenue edge | Trustees of Harbor Towers | Private | Feasibility Study | Collaboration with CA/T project re. sidewalk and wall
B2 Batterymarsh Street condominiums | Robt C Nordblom HSI | Private | Concept | Presentation to owner
B2 India Street commercial / retail | Robins Realty / Ray C Johnson | Private | Concept | Presentation to owners
C1 The Grain Exchange new entrance and upgrade | Bruce A Beal | Private | Concept / Feasibility Study | Collaboration with CA/T project re. front entrance ramp and public plaza
C2 Custom House / Milk Street / Central Street | numerous | Public / Private (group) | Concept | Further study required
C3 Central Wharf upgrade, including Parcel A3N | NE Aquarium / InterPark / 255 State / Marriott Long Wharf | Public / Private (group) | Feasibility Study | Further study required including traffic movements. Parcel A3N (Frog Pond Trust) alternatives to integrate Central Wharf / Parcels 15 and 16.
D1 Marketplace Center opening up storefront | Sullivan Properties | Private | Concept | Implementation as required
D2 Marriott Long Wharf storefront extensions | Edward H Linde Trusts / Marriott | Private | Concept | Implementation as required
Northern Avenue Bridge Plaza / Hook Lobster | City of Boston / Hook Lobster | Public / Private | Concept | Further study required with bridge refurbishment
Broad Street / Wendell / Wharf Street facelift | City of Boston / individual owners | Public / Private | Concept | Broad street area study required.
McKinley Square / India / Milk / Central / State | City of Boston / individual owners | Public / Private | Concept | Study linkage to Central and Long Wharves.
Harbor Islands Gateway Information Center | Boston Harbor Islands Partnership | Public / Private | Concept | Feasibility Study ongoing for location on Parcel 14

ARTS PROGRAM
An additional initiative, not treated in this study, would be the introduction of an arts program for the Wharf District, to be coordinated and integrated with the Artery Arts program to provide a coherent theme for the District. On the waterfront, opportunities for art installations are presented in the plaza in front of Northern Avenue Bridge; India Wharf; Central Wharf and Long Wharf. On the city side of the Artery, similar opportunities exist in Fort Hill Square and McKinley Square and at the frontage of the Dock Square Garage on Clinton Street.
EXECUTIVE SUMMARY
CA/T Wharf District Contracts and Edges Coordination

The Wharf District | Financial District Edges report has been in preparation simultaneously with the design process for the future parks of Parcels 14 through 17 (the EDAW / Copley Wolff Wharf District Parks plan) and as the surface restoration plan for the ‘outboard’ paving and planting has been finalized for construction (the C17A6 contract). This section aims to correlate those Edge Study proposals affecting public streets and sidewalks with the two ongoing CA/T contracts.

EXECUTIVE SUMMARY

A1 INTERNATIONAL PLACE
Additional tree planting and new entrance could be implemented as private initiative

A2 INDEPENDENCE WHARF MOAKLEY BRIDGE HOOK LOBSTER
Special paving could be implemented in public/private partnership

A3 400 ATLANTIC AVENUE
Brick paving in front of building to be replaced as part of C17A6 contract

A4 ROWES WHARF
Relocated hotel entrance, realigned trees, paving and bollards could be implemented in public/private partnership in coordination with C17A6 contract

B1 HARBOR TOWERS
Realigned wall, new paving and tree planting may be undertaken as private initiative coordinated with C17A6

B2 EAST INDIA ROW
Special paving could be implemented as a public/private initiative. The special paving linking East India Row and Wharf Street (between parcels 16 and 17) is acknowledged in the Wharf District Parks plan.

B3 195 STATE STREET
Special paving on State, Central and Milk streets, as acknowledged in CA/T Wharf District Parks plan, could be implemented as a public initiative in coordination with C17A6 contract.

B4 PARCEL A3N
Special paving on Central Wharf could be implemented as a public/private initiative. Acknowledged in the Wharf District Parks plan

C1 GRAIN EXCHANGE
Raised planter transformed into public plaza could be implemented in public/private partnership coordinating with C17A6 contract. This feature has not been addressed in the Wharf District Parks plan.

C2 195 STATE STREET
Special paving on State, Central and Milk streets, as acknowledged in CA/T Wharf District Parks plan, could be implemented as a public initiative in coordination with C17A6 contract.

C3 255 STATE STREET CENTRAL WHARF HARBOR GARAGE
Special paving on Central Wharf could be implemented as a public/private initiative. Acknowledged in the Wharf District Parks plan

D1 MARKETPLACE CENTER
Tree relocation could be incorporated in C17A6 contract.

D2 MARRIOTT LONG WHARF
Extension of building frontage to property line and potential repaving could be implemented as a private initiative.
